

To Who It May Concern,

I am writing about the interference power line communications and the ramifications it would have to the amateur radio spectrum especially in times of emergency communications on the HF bands. I'm especially troubled as Training Officer in Rennselear County Ares/Races in conjunction with local and federal Law Enforcement, as well as EMS and FIRE which in emergency we are in direct communication with O.E.M. or EOC for SEMO and FEMA when they can not talk to each other due to different frequencies and bands many times we fill that gap. And I was personally involved in 2 instances where Forestry and EMS could not talk to each other as well as FIRE and State or Local Police and Sheriff Depts. And the use of HF on a larger scale as in tornado and flood zones as well as the passing of ARRL RADIOGRAMS which are worldwide third party message handling for priority and Emergency or Health and Welfare message which in transcontinental use rely on HF for DELIVERY. I can go on with many more reasons to block this plan but I'm sure you are aware of all the reasons but most of all in these times of unrest in the World we should try to enhance communication not interfere with it. Thank You For your time to read. Yours in Service
